

1. Let R be the region of integration pictured below right. Evaluate $\iint_R 6y \, dA$. (4 points)

$$\int_0^1 \int_{-y}^{y+1} 6y \, dx \, dy$$

$$= \int_0^1 6yx \Big|_{x=-y}^{x=y+1} dy = \int_0^1 6y(2y+1) \, dy$$

$$= \int_0^1 12y^2 + 6y \, dy = 4y^3 + 3y^2 \Big|_{y=0}^{y=1} = 7$$

$$\iint_R 6y \, dA = 7$$

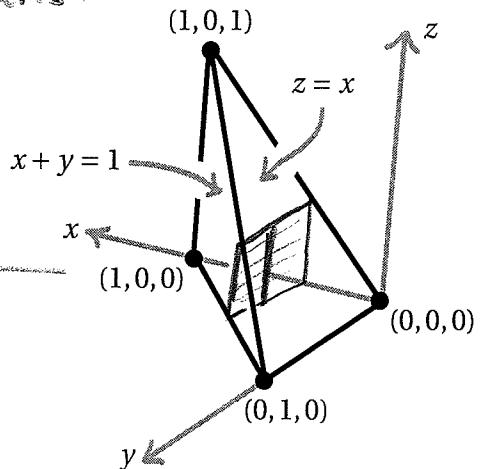

2. Set up, but DO NOT EVALUATE, a triple integral that computes the volume of the tetrahedron shown at right. (5 points)

Two common correct ans:

a) $\int_0^1 \int_0^{1-x} \int_0^x dz \, dy \, dx$

$$1$$

$$dz \, dy \, dx$$

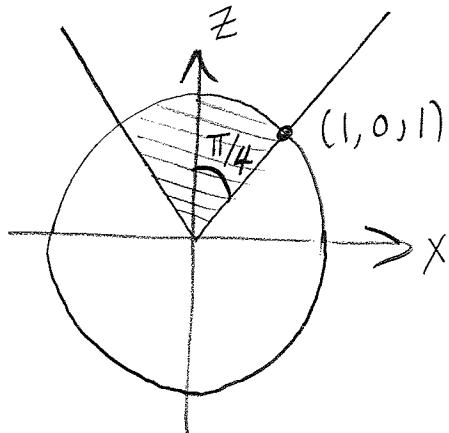

b) $\int_0^1 \int_0^{1-y} \int_0^x dz \, dx \, dy$

$$1$$

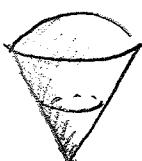

$$dz \, dx \, dy$$

3. Set up, but DO NOT EVALUATE, a triple integral that computes the volume of the region that lies inside the sphere $x^2 + y^2 + z^2 = 2$ and above the cone $z = \sqrt{x^2 + y^2}$. (5 points)

Cross section:

3D:

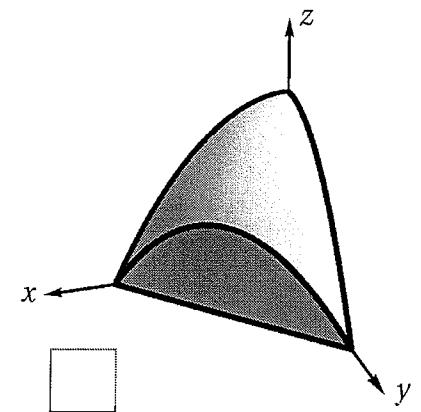

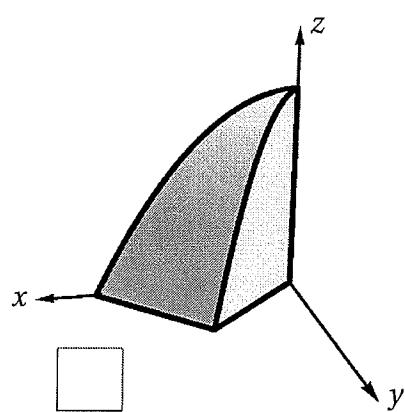

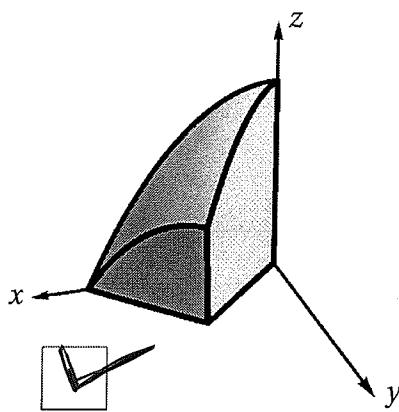

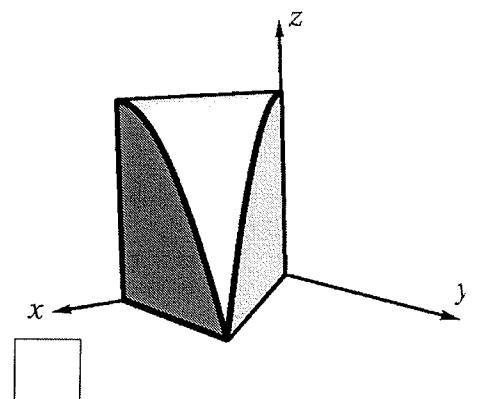

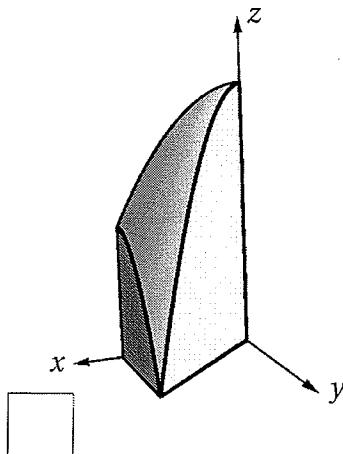

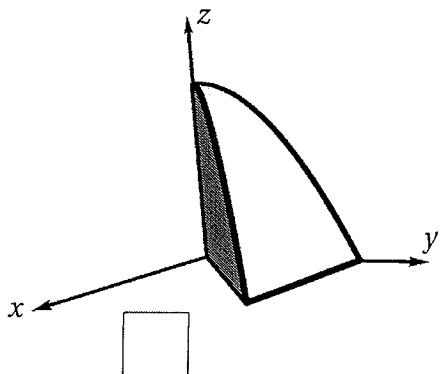

Using spherical coordinates.

$$\int_0^{2\pi} \int_0^{\pi/4} \int_0^{\sqrt{2}}$$

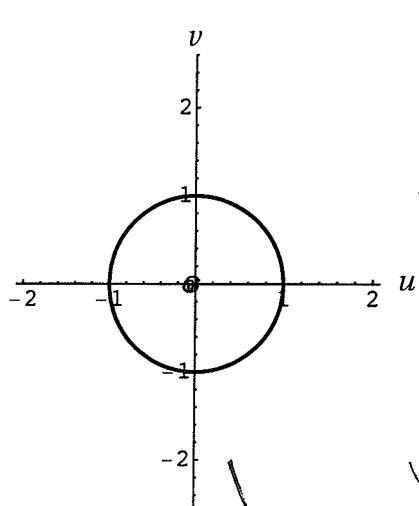

$$r^2 \sin \phi \, dr \, d\theta \, d\phi$$

$$= 1 \, dV$$

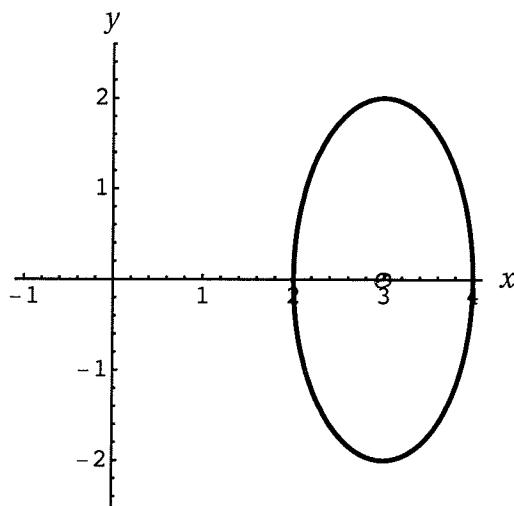

4. Consider the triple integral $\int_0^{1/2} \int_y^{1-y} \int_0^{1-x^2-y^2} f(x, y, z) dz dx dy$. Mark the corresponding region of integration below. (3 points)

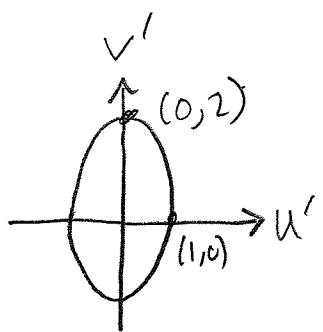

5. Find a transformation $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ which takes the unit circle to the ellipse given by $(x-3)^2 + \frac{y^2}{4} = 1$ as shown. (3 points)

T

$$(u, v) \mapsto (u, 2v)$$

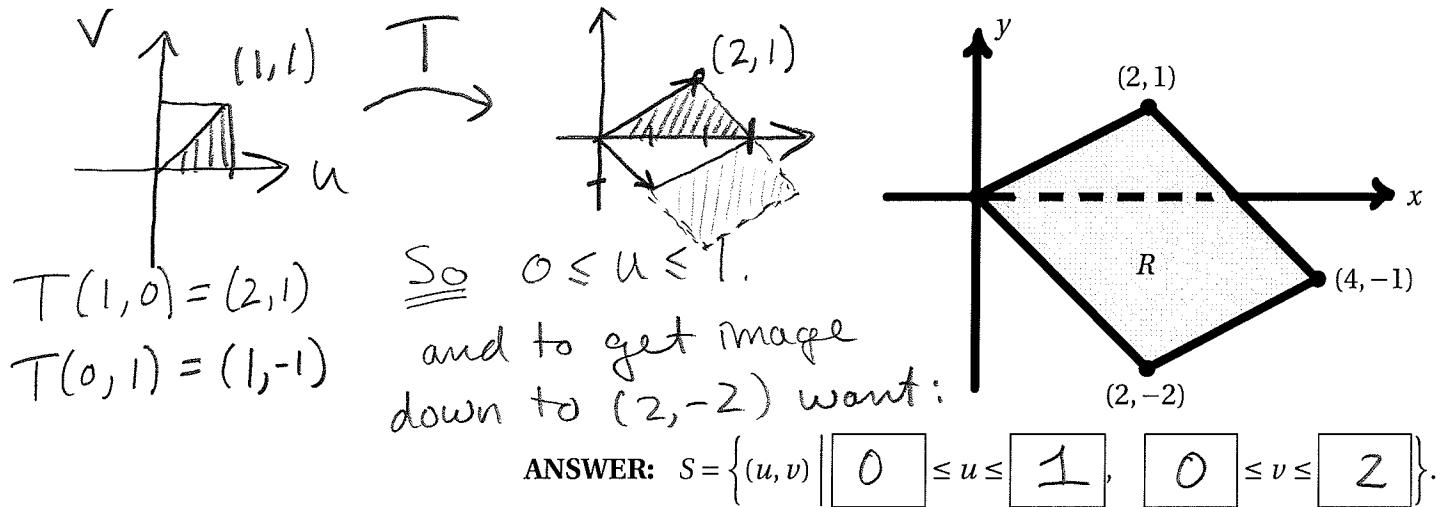

$$(u', v') \mapsto (u'+3, v')$$

$T(u, v) = (u+3, 2v)$

6. Let R be the region in the xy -plane depicted below right. Let $T(u, v) = (2u + v, u - v)$.

- (a) Find a rectangle S in the uv -plane whose image under T (that is, the collection of points $T(u, v)$ for all choices of (u, v) in S) is exactly R . (3 points)

- (b) Set up, but DO NOT EVALUATE, the integral $\iint_R \cos(x) dA$ as an integral in the (u, v) -coordinates. If you can't do part (a), leave the limits of integration blank. (5 points)

$$\begin{aligned} \iint_R \cos(x) dA &= \int_0^2 \int_0^1 \cos(2u+v) |\det J| du dv \\ &= \int_0^2 \int_0^1 3 \cos(2u+v) du dv \end{aligned}$$

$$J = \begin{pmatrix} 2 & 1 \\ 1 & -1 \end{pmatrix}$$

$$\begin{aligned} \det J &= -2 - 1 \\ &= -3 \end{aligned}$$

$$\boxed{\iint_R \cos(x) dA = \int_0^2 \int_0^1 3 \cos(2u+v) du dv}$$

7. Let $\mathbf{F}(x, y) = \langle x^2, x^2 \cos(y) \rangle$. Then $\iint_R \left[\frac{\partial}{\partial x} (x^2 \cos(y)) - \frac{\partial}{\partial y} (x^2) \right] dA = 0$ where R is the region shown below.

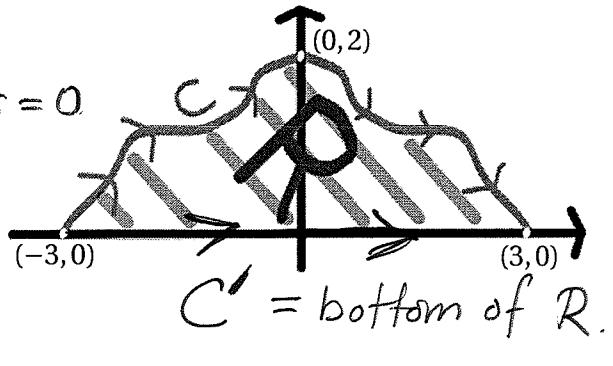

Compute $\int_C \mathbf{F} \cdot d\mathbf{r}$, where C is the pictured curve that goes from $(-3, 0)$ to $(3, 0)$ via $(0, 2)$. (3 points)

By Green, we have $\int_{C-C'} \vec{F} \cdot d\vec{r} = \iint_R \frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} dA = 0$

$$\text{Thus } \int_C \vec{F} \cdot d\vec{r} = \int_{C'} \vec{F} \cdot d\vec{r}$$

$$= \int_{C'} x^2 dx + \int_{C'} x^2 \cos y dy \quad \text{always } = 0$$

$$= \int_{-3}^3 x^2 dx = \frac{x^3}{3} \Big|_{-3}^3 = \boxed{18}$$

8. Consider the region D in the plane bounded by the curve C as shown at right. For each part, circle the best answer. (1 point each)

(a) For $\mathbf{F}(x, y) = \langle x+1, y^2 \rangle$, the integral $\int_C \mathbf{F} \cdot d\mathbf{r}$ is

negative zero positive

$$\begin{aligned} \int_C \mathbf{F} \cdot d\mathbf{r} &= \iint_R \frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} dA \\ &= \iint_R 0 dA = 0 \end{aligned}$$

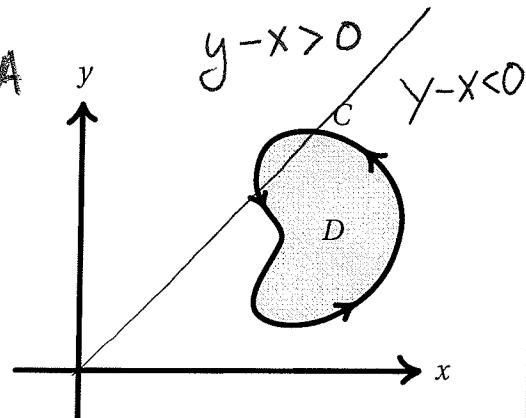

(b) The integral $\int_C (-y dx + 2 dy)$ is

negative zero positive

$$\begin{aligned} \int_C (-y dx + 2 dy) &= \iint_R \frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} dA = \iint_R 1 dA \\ &= \text{Area}(R) \end{aligned}$$

(c) The integral $\iint_D (y-x) dA$ is

negative zero positive

9. For each surface S below, give a parameterization $\mathbf{r}: D \rightarrow S$. Be sure to explicitly specify the domain D and call your parameters u and v .

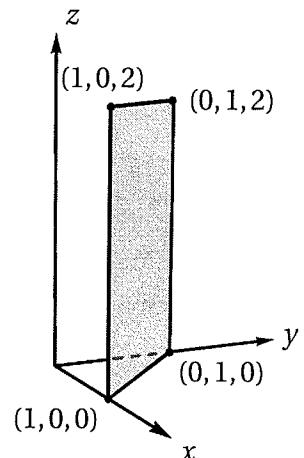

- (a) The rectangle in \mathbb{R}^3 with vertices $(1, 0, 0), (0, 1, 0), (1, 0, 2), (0, 1, 2)$. (3 points)

Can use coordinates x and z as parameters, call them u and v . Since this rect. is contained in the line $x+y=1$, get

$$y = 1 - x = 1 - u$$

$$D = \{ 0 \leq u \leq 1 \text{ and } 0 \leq v \leq 2 \}$$

$$\mathbf{r}(u, v) = \langle u, 1 - u, v \rangle$$

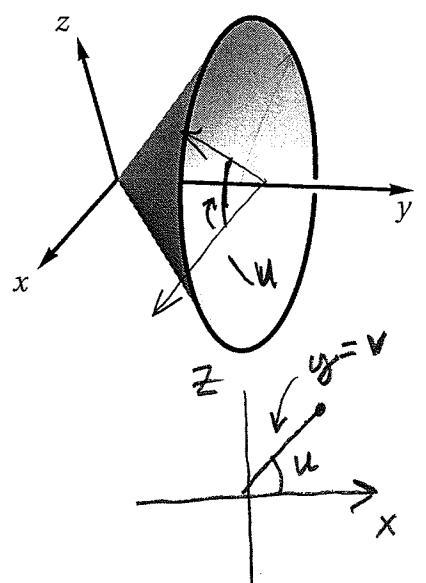

- (b) The portion of cone $y = \sqrt{x^2 + z^2}$ for $0 \leq y \leq 1$ which is shown at right. (4 points)

Can use $v=y$ and the angle u shown as the parameters. Also, the radius of the circle with y fixed is just y , and hence:

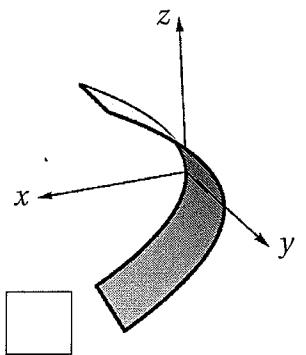

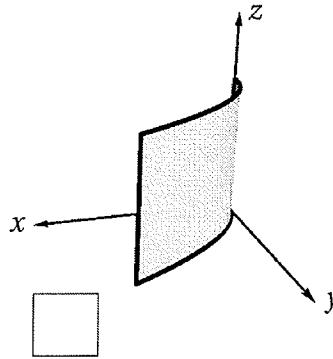

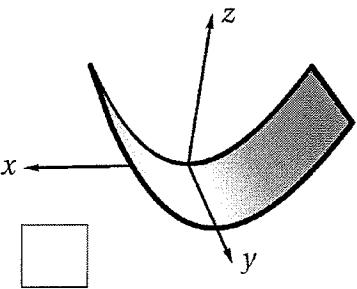

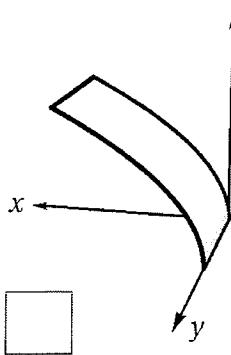

$$D = \{ 0 \leq u \leq 2\pi \text{ and } 0 \leq v \leq 1 \}$$

$$\mathbf{r}(u, v) = \langle v \cos u, v, v \sin u \rangle$$

10. Consider the surface S parameterized by $\mathbf{r}(u, v) = (v^2, u, v)$ for $0 \leq u \leq 1$ and $0 \leq v \leq 1$.

- (a) Mark the correct picture of S below. (2 points)

- (b) Evaluate the integral $\iint_S z \, dA$. (6 points)

$$\begin{aligned} \iint_S z \, dA &= \int_0^1 \int_0^1 v \sqrt{|\vec{r}_u \times \vec{r}_v|} \, du \, dv = \int_0^1 \int_0^1 v \sqrt{1+4v^2} \, du \, dv \\ &= \int_0^1 v \sqrt{1+4v^2} \, dv = \int_1^5 \frac{1}{8} \sqrt{w} \, dw \\ &\quad dw = 8v \, dv \\ &= \frac{1}{12} w^{3/2} \Big|_{w=1}^{w=5} = \frac{1}{12} (5^{3/2} - 1) \end{aligned}$$

$$\begin{aligned} \vec{r}_u \times \vec{r}_v &= \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 0 & 1 & 0 \\ 2v & 0 & 1 \end{vmatrix} \\ &= (1, 0, -2v) \\ |\vec{r}_u \times \vec{r}_v| &= \sqrt{1+4v^2} \end{aligned}$$

$$\boxed{\iint_S z \, dA = \frac{1}{12} (5^{3/2} - 1)}$$

11. Consider the solid described as follows using cylindrical coordinates: E is the region inside the paraboloid $z = 1 - r^2$ and where $0 \leq \theta \leq \pi$ and $z \geq 0$. Choose one double integral and one triple integral below that compute the volume of E . (1 point each)

$\int_0^1 \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} \int_0^{\sqrt{1-x^2-y^2}} 1 \, dz \, dx \, dy$

$\int_0^1 \int_0^{\sqrt{1-z}} 2\sqrt{1-z-y^2} \, dy \, dz$

$\int_0^1 \int_{-\sqrt{1-z}}^{\sqrt{1-z}} \int_0^{\sqrt{1-z-x^2}} 1 \, dy \, dx \, dz$

$\int_0^1 \int_0^{\sqrt{1-z^2}} 2\sqrt{1-y^2-z^2} \, dy \, dz$

$\int_0^1 \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} \int_0^{1-\sqrt{x^2+y^2}} 1 \, dz \, dx \, dy$

$\int_0^1 \int_0^{1-z} 2\sqrt{(1-z)^2-y^2} \, dy \, dz$
