The arcsin function

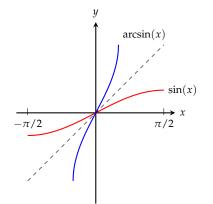

To make the sine function one-to-one we restrict its domain:

Function:sin(x)Domain: $[-\pi/2, \pi/2]$ Range:[-1, 1]

Its inverse function is the arcsin function:

Function: $\arcsin(x)$ Domain:[-1,1]Range: $[-\pi/2,\pi/2]$

The function $\arcsin(x)$ is sometimes denoted $\sin^{-1}(x)$

Recall that $\arcsin(\text{also known as } \sin^{-1})$ is the inverse function for $\sin(x)$ on the domain $[-\pi/2, \pi/2]$.

So: $\arcsin(x)$ has domain [-1, 1] and range $[-\pi/2, \pi/2]$

Which of the following statements are correct?

- (A) $\sin(\arcsin(1/2)) = 1/2$
- (R) $\arcsin(1/2) = \pi/6$
- (C) $\arcsin(\sin(8\pi)) = 8\pi$
- (S) sin(arcsin(4)) = 4
- (I) sin(arcsin(-1/2)) = -1/2
- (N) $\sin(\arcsin(\sqrt{2}/2)) = -\sqrt{2}/2$

The derivative of arctan

We'll again use implicit differentiation.

Let $u(t) = \arctan(t)$. Then

 $\tan(u(t)) = t$

 \mathbf{so}

$$\sec^2(u(t))u'(t) = 1$$

or

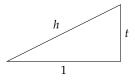

$$u'(t) = \cos^2(u(t))$$

From the triangle at right, we get

$$\cos(u(t)) = \frac{1}{\sqrt{1+t^2}}$$

$$\frac{d}{dt}\arctan(t) = \frac{1}{1+t^2}$$

The derivative of arcsec

Let
$$u = \operatorname{arcsec}(t)$$
. Then

$$t = \sec(u)$$

so

$$1 = \sec(u)\tan(u)\frac{du}{dt}$$

Hence

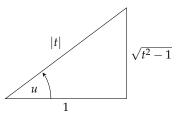

$$\frac{du}{dt} = \cos(u)\cot(u)$$

From the triangle at right we get

$$\frac{du}{dt} = \frac{1}{|t|} \cdot \frac{1}{\sqrt{t^2 - 1}}$$

Conclusion:

$$\frac{d}{dt}\operatorname{arcsec}(t) = \frac{1}{|t|\sqrt{t^2 - 1}}$$
